CRP (QUANTITATIVE)  
Immunoturbidimetry

## SEROLOGY

| Result | Unit | Normal Value |
|--------|------|--------------|
| 10.98  | mg/L | 0.0 - 06.0   |

### INTERPRETATION :-

In normal healthy individuals, CRP levels generally do not exceed 10 mgm/L. CRP plays a role in host defence and tissue repair. There is a lag time of 6 -10 hrs between stimulus and rise in serum levels, as compared to a lag time of 24-72 hrs, for other acute phase reactants.
